○ Repo Organization

- The API code is at the root of the repository so that it can be deployed to Heroku using the normal PHP build pack.
 - Uses Laravel's folder structure.
<https://laravel.com/docs/5.5/structure>
- The web client is in the web directory.
 - Uses react-scripts [folder structure](#).
- MySQL must be installed already. To build the code simply run `./setup.sh`
 - To run the development server change directories into the web directory and `yarn start`.
